Wiring diagram

Functional principle

Sensor with 3 integrated operation modes:

1. Pattern recognition, checks if a pattern on a target is identical to the reference pattern.
2. BLOB recognition, for recognition of one or more features.
3. BLOB and location tool for motion control.

Sensor configuration via PC is not required!
Transmission of log files and firmware updates via USB interface. Up to 30 inspections can be stored.

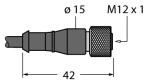

Selecting the focal length

With known object size or scan field the matching vision sensor is found simply by determining the ratio between the sensing range and the focal length. Use the graphics for selection. Here, the sensing ranges are put in relation to the field view and the lens focal length.
